## $1^{\text {st }}$ exercise: (4 pts)

Choose with justification the correct answer:

| No. | Questions | Answers |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | a | b | c |
| 1. | The area of triangle $A B C$ is | $2 \sqrt{3} \mathrm{~cm}^{2}$ | $4 \sqrt{3} \mathrm{~cm}^{2}$ | $12 \mathrm{~cm}^{2}$ |
| 2. | If $E=\frac{3^{13}-3^{12}}{2}$, then $\mathrm{E}=$ | $\frac{3}{2}$ | 0 | $3^{12}$ |
| 3. | If $R N S K$ is a parallelogram, then $x^{o}=$ | $60^{\circ}$ | $80^{\circ}$ | $120^{\circ}$ |
| 4. | If $4^{2} \times 2^{x+1} \times 2^{3}=8^{5}$, then $x=$ | 23 | -1 | 7 |

## $\mathbf{2}^{\text {nd }}$ exercise: (4pts)

Consider the following numbers:
$A=\frac{1}{5}-\left(\frac{2}{5}\right)^{2} ; B=(2-\sqrt{5})^{2}+2(8+\sqrt{20}) ; C=-\frac{1.25 \times 8 \times 10^{7} \times 10^{-4}}{4 \times 10^{2}}$.
By writing all the steps of calculations:

1) Write $A$ in the form of an irreducible fraction then in scientific notation. (1pt)
2) a. Show that $B$ is a natural number. ( 1 pt )
b. Show that C is an integer. $(1 \mathrm{pt})$
3) Show that among $A, B$, and $C$, there are two opposite numbers and two reciprocal numbers. Justify.(1pt)

## $3^{\text {rd }}$ exercise: (3pts)

Given the following numbers:

$$
X=2 \sqrt{75}+3 \sqrt{48}+2 \sqrt{27}-2 \sqrt{363} \quad \& \quad Y=(2+3 \sqrt{2})^{2}+(2 \sqrt{2}-3)(2 \sqrt{2}+3)
$$

1) Write $X$ in the form $a \sqrt{3}$ and $Y$ in the form $b+c \sqrt{2}$ where $a, b$, and $c$ are integers to be determined. (2pts)
2) Rationalize the denominator of $\frac{A}{B} \cdot(1 \mathrm{pt})$

## $4^{\text {th }}$ exercise: (6pts)

Consider the following polynomial:

$$
N(x)=4 x^{2}-(2 x-3)^{2}-2(x-1)(3-2 x)-9
$$

1) $\operatorname{Develop} \mathrm{N}(\mathrm{x}) .(3 / 4 \mathrm{pt})$
2) Prove that $N(x)$ can be written in the form $N(x)=2(2 x-3)(x+2)$ in two different ways.( $11 / 2 \mathrm{pts}$ )
3) Calculate the numerical value of $N(-2)$.What can you say about $x=-2$ ? Justify. ( $1 / 2 \mathrm{pts}$ )
4) Let $R(x)=(2 m+1) x^{2}-3 m x-4$.
a. Find the value of $m$, if -1 is a root of $R(x) \cdot(1 / 2 \mathrm{pt})$
b. Write the expression $R(x)$ as a product of two factors, in case $m=0$, then solve the following equations:
i) $\mathrm{R}(\mathrm{x})=-2$
ii) $R(x)=(2 x+4)$
( $1 / 4.1 / 2,3 / 4 \mathrm{pts}$ )
5) a. If $K(x)=\frac{R(x)}{N(x)}$, then find the values of x for which $K(x)$ is defined. $(1 / 2 \mathrm{pt})$
b. Solve the equation $K(x)=\frac{3}{2} \cdot(3 / 4 \mathrm{pt})$

## $5^{\text {th }}$ exercise: (5pts)

Consider a parallelogram $A B C D$ such that $A C=A B$ and let $M$ be the midpoint of [ $B C]$.

1) Draw a figure. $(1 / 2 \mathrm{pt})$
2) Show that $(A M) \perp(B C)$. $(1 / 2 \mathrm{pt})$
3) Plot $E$, the symmetric of $A$ with respect to $M$. What is the nature of quadrilateral $A B E C$ ? (1pt)
4) Show that the points $D, C$ and $E$ are collinear and that $C$ is the midpoint of $[D E]$. (2pts)
5) Show that triangle DAE is right at A. (1pt)

## $6^{\text {th }}$ exercise: (8pts)

Consider an isosceles triangle AMT at vertex M. H is the fourth vertex of the parallelogram MATH.
Let [My) be the bisector of $A \hat{M} T$ that cuts [AT] at $\mathrm{O}, \&$ let R be the symmetric of M with respect to O .

1. Reproduce the figure and complete it. ( $11 / 2 \mathrm{pts}$ )
2. a. What does the straight-line (MO) represent for [AT]? Justify. (1pt)
b. Determine the nature of quadrilateral MART. ( $1^{1 / 2} \mathrm{pts}$ )
c. Show that MH $=2 \mathrm{TO}$. ( 1 pt )
3. Let I be the midpoint of $[\mathrm{MH}]$. Show that TOMI is a rectangle. ( $1 \frac{1}{2} \mathrm{pts}$ )

4. How should the nature triangle AMT be changed so that MART becomes a square? Explain your answer. ( $1 \frac{1}{2}$ pts)
